Editorial

Greeting to the readers.

The current issue of the journal comprises four research articles and a review article on various sports science disciplines. In the first article, researchers analysed the comparative changes in Anthropometric characteristics among Track and Field Athletes. This type of study will also help to use the Anthropometric traits as identifying criteria during the selection procedure.

In the second study, researchers intended to imply with scientific evidence how motivational high-tempo music may impact overall performance especially observed via the Cardio-Respiratory Exercise test on a Treadmill.

Mental Toughness is a key psychological variable to optimize performance. The author of the third study has analysed the same and depicts the relationship between sports achievements with mental toughness among kabaddi players.

In the fourth study, the researchers do imply the biomechanical importance of team game performance. The author has tried to identify the indicator from the Kinematic profile to predict selected motor abilities in field hockey players.

In the concluding article, the researchers reveal the importance of Iron as a supplement to optimize performance and its response in the

human body in terms of metabolism, absorption, and its relation with athletic performance.

We hope this issue will be helpful and fascinating to the readers.
