Editorial

The sports research journal aims to promote research and scientific insight into sports training applications. In this edition the first article is a study of morphological differences in terms of height, weight ratio between Himachal Pradesh and Punjab boxers of age group 16-20 years. The study was conducted to see the variables in Indian athletes.

The second article is a survey conducted to know the knowledge, attitude and practices about healthy eating of aspiring coaches of various disciplines.

The third article discuss in detail regarding nutrient requirement during training at high altitude. Well planned nutritional strategy plays an important role in combating adverse altitude challenges during training.

In the last article, the dietary habits of elite table tennis players in competition and travelling is evaluated and found to be insufficient.

This awareness motivates us to counsel the athletes regarding the importance of the guidance of nutritionist.

I wish you all to take care to remain safe and stay healthy during this COVID-19 pandemic
