Editorial

This issue of the Journal carries five articles on sports and sports sciences.

The author of the first article studies the effect of yogic practice on selected psychological variables among athletes and finds that yogic practice significantly reduces the stress and competition anxiety ; and increases self-confidence among athletes.

The second article is a study of relationship of performance of men Javelin throwers with lower body maximum strength, power, and speed field tests. The authors conclude that in view of the significant relationship, the practice of focusing on maximum strength and power by the coaches is correct.

The third article is a case study of asymptomatic sinus node dysfunction in an elite Volleyball player with suspected ECG findings. Authors feel that cardiovascular screening of a player is essential to prevent sudden cardiac arrest in sportspersons.

The authors of the next article study the relationship between female Hammer Throw performance and selected basic and specific tests. In view of the significance of the relationship the authors recommend specific training to improve the performance in these tests.

The last article is a systematic review of anticipation in Racquet sports using

contextual information spanning the last 18 years. The author finds evidence, though not very conclusive, that anticipatory skill did improve performance outcomes in Racquet sport players.

We hope you would find these presentations interesting and useful.
